

## **Stories**

As a user, I want **to create the code for a custom email signature** so I can **add my contact information to my emails**.

### **Basic layout:**

1. Pick a cool template
2. Fill out all the desired fields with your information
3. Click on the “Submit” button
4. Copy the generated code
5. Follow the instructions to add your new cool signature into your preferred email server

### **Detail UX:**

1. Pick a cool template  
Have a list with images of available templates to show how my email signature will look like
2. Fill out all the desired fields with your information  
A form to fill out with the contact information I would like to show in my signature. Also I can upload my own image or choose to have a random .gif file added to my signature.
3. Click on the “Submit” button  
Easy way to submit my information after filling it out in the form. After clicking the “submit” button, my signature’s code will be generated.
4. Copy the generated code

The generated code will appear in a window where I can copy it to my clipboard.

5. Follow the instructions to add your new cool signature into your preferred email server.

This site will include instructions to help me add the signature code into my email server.
